FOR IMMEDIATE RELEASE

DutyCrew - A new and fast approach to building Web-sites.

The fastest way to make a user-friendly html web-site has just got even better!

Web-site creation software **DutyCrew2**, developed in Sheffield, UK, by software development company, DutyCrew Ltd, is now cross-platform and available to anyone with a computer with **Windows Vista, Windows XP, Windows 2000, Mac OS X Tiger and Mac OS X Leopard.**

Making the announcement, Biz King said:

*“Now anyone can easily **build a simple web-site in a matter of minutes.** Our software’s **robust and patented** capabilities allow people to build a decent **multi-page web-site within a day** and change it around as much as they like **without any problems.**”*

Initially **launched in March 2007**, on the Mac platform, the DutyCrew software has now been adapted for the Windows platform and the new Mac operating system, Leopard, with a whole host of additional features and enhancements.

About an hour to learn:

After installation, which takes a matter of moments, users need only about an hour to learn how the software works, which is easily done with DutyCrew’s ever-expanding **online tutorials and documentation.** Learning is via a process of simple “do it like this” image based tutorials and is easily understood.

Download:

Unlimited duration demonstration software is now available.

Download for Mac and Windows computers from <http://www.dutycrew.com/downloads.htm>

Pricing:

Priced at **£26 +VAT (GBP) for a full license**, the software licenses can be transferred easily between machines and platforms. Licenses are purchased and managed via the online user controls provided by DutyCrew Ltd. A **subscription license** is also available, which costs just **£2 + VAT (GBP) per calendar month**, for those with less disposable income, or who simply do not wish to purchase the software outright.

The Future:

There are upgrades planned to add the following features (amongst others) in the next few months:

- Improved ease of use, user feedback and enhanced menu systems.
- Extra language support (Welsh is also built in to the system as a beta language)
- Optional Rounded Menus and Categories
- Optional “Live” drop-down menus.
- Support for PHP and ASP/ASPX code.
- Introduction of basic image editing capabilities.
